Project Title	EV Market Intelligence Dashboard
Maximum Marks	3 Marks

Project Proposal (Proposed Solution) template

This project proposal outlines a solution to address a specific problem. With a clear objective, defined scope, and a concise problem statement, the proposed solution details the approach, key features, and resource requirements, including hardware, software, and personnel.

Project Overview	
Objective	Build an interactive EV Market Intelligence Dashboard that gives strategy, BI and research users a single view of EV sales, battery technology, range, customer ratings and manufacturing footprint.
Scope	A single-page web dashboard covering 40 sample EV models across six categories (hatchback, sedan, SUV, bus, truck, two-wheeler), with persona views, filters, KPI cards, charts and a sortable model table. Live data feeds and forecasting are out of scope.
Problem Statement	
Description	EV market data is scattered across reports and spreadsheets, so decision-makers spend time combining it by hand and cannot easily compare categories, manufacturers, battery types and countries.
Impact	One interactive view speeds up decisions: it shows market leaders, the battery mix and high-growth segments, links battery type with range and satisfaction, and reduces manual reporting effort.
Proposed Solution	
Approach	Prepare the EV dataset, define the KPIs, build persona-based views in HTML, CSS and JavaScript with Chart.js, add filters and a sortable table, then test the dashboard and share it as a web page.
Key Features	Persona tabs (Strategy, BI, Research); filters for category, battery, country and manufacturer; KPI cards; auto-generated insights; charts

	for sales, share, battery mix, range, ratings and trend; sortable model explorer; light and dark theme.

Resource Requirements

Resource Type	Description	Specification/Allocation
Hardware		
Computing Resources	CPU/GPU specifications, number of cores	Standard laptop or PC with 2+ CPU cores; no GPU required
Memory	RAM specifications	4 GB RAM or more
Storage	Disk space for data, models, and logs	Under 5 MB for the dashboard page and data
Software		
Frameworks	Web / application frameworks	None required; plain HTML, CSS and JavaScript as a static web page
Libraries	Additional libraries	Chart.js 4.4 for charts
Development Environment	IDE, version control	VS Code, Git / GitHub, Chrome or Edge DevTools
Data		
Data	Source, size, format	Illustrative sample of 40 EV models (manufacturer, country, category, battery, range, price, rating, 2025 sales), embedded in the page; replaceable with CSV or Excel data
