Project Name	EV Market Analytics Dashboard
Maximum Marks	5 Marks

Creating an effective dashboard involves thoughtful design to ensure that the presented information is clear, relevant, and easily understandable for the intended audience. Here are some key principles and best practices for dashboard design

Activity 1: Interactive and visually appealing dashboards

Creating interactive and visually appealing dashboards involves a combination of thoughtful design, effective use of visual elements, and the incorporation of interactive features. Here are some tips to help you design dashboards that are both visually appealing and engaging for users so take care of below points

- Clear and Intuitive Layout – KPI tiles at the top, followed by charts for sales, manufacturers, battery technology and countries, arranged in a logical left-to-right flow.
- Use Appropriate Visualizations – bar charts for categories, line chart for trends, treemap/donut for share, filled map for countries and scatter plot for capacity vs range.
- Colour and Theming – a consistent colour palette per battery type and vehicle category across all sheets.
- Interactive Filters and Slicers – filters for year, vehicle category, manufacturer, battery type and manufacturing country applied to all worksheets.
- Drill-Down Capabilities – dashboard actions (filter and highlight) let users click a category or manufacturer to see detail in the other charts.
- Responsive Design – dashboard sized to fit the screen using layout containers.
- Custom Visuals and Icons – tooltips with extra detail and icons on the KPI tiles.
- Use of Infographics – KPI summary tiles and highlighted top performers.

[Insert dashboard screenshot here]

Major outcomes:

- **KPI overview of market scale:** The KPI tiles show total annual sales, average driving range, average battery capacity, average customer rating and number of manufacturers [add values from your dashboard].
- **Sales concentration by vehicle category:** The sales by category chart shows which segments contribute most to annual sales [add top category and value].
- **Manufacturer market share:** The market share view shows which manufacturers lead and how their customer ratings compare [add top manufacturer and share].
- **Battery technology adoption:** The battery charts compare LFP, NMC, NCA, Sodium-Ion and Solid-State in sales share, range and capacity [add most adopted type].
- **Geographic production trends:** The map shows which countries lead EV manufacturing [add top country]. Filters let users focus on any year, category or battery type.
