By using stories in Tableau, you can effectively communicate complex data in a way that is both interactive and engaging, making it easier for the audience to follow along and understand the insights. It's a tool for **data storytelling**, allowing you to present insights in a cohesive, engaging way that takes viewers through a logical progression of findings or analyses.

In Tableau, **Story** is a feature that allows you to create a sequence of dashboards, visualizations, and text to present data insights in a cohesive and narrative-driven way. It's like a slideshow within Tableau that guides the audience through a series of data points, helping them understand key insights, trends, or outcomes of your analysis.

Observations:

- **Story flow:** The story walks the viewer through four points: market overview, manufacturer comparison, battery technology insights and a conclusion.
- **Sales by vehicle category:** Shows which segments contribute most to annual sales [add top category and value].
- **Manufacturer and battery insights:** Compares market share and customer ratings, and shows which battery type is most adopted [add top manufacturer and battery type].
- **Takeaway:** Combines range, capacity and country data to support product positioning and market expansion decisions [add your main conclusion].

## Activity 2:

Publish Story on Tableau Public and Paste Public link below
