Scalability & Future Plan

Date	15 March 2026
Team ID	XXXXXX
Project Name	EV Market Analytics Dashboard
Maximum Marks	1 Mark

Scalability & Future Plan:

This document outlines how the current project solution can be scaled to handle larger user bases, increased data loads, or extended features in the future. It also captures the team's roadmap for enhancing and evolving the project beyond its current state.

Current System Limitations:

S.No	Limitation	Impact	Priority to Address (High / Medium / Low)
1	Dashboard uses a static dataset that is refreshed manually.	Insights may become outdated as new sales data is released.	High
2	No forecasting of future sales or battery adoption.	Users cannot plan ahead; only historical trends are visible.	Medium
3	Limited coverage of charging infrastructure and sustainability metrics.	Analysis of adoption drivers is incomplete.	Medium

Scalability Plan:

S.No	Scalability Aspect	Current State	Proposed Upgrade / Solution
1	User Load	Used by a small group of analysts and reviewers.	Publish on a cloud BI service with role-based access for many concurrent users.
2	Data Storage	Single flat file (CSV / Excel).	Move to a cloud database or data warehouse with scheduled refresh.
3	Performance	Fast on current data volume.	Use aggregated tables, extracts and incremental refresh as data grows.
4	Security	Shared file access.	Add row-level security, user authentication and audit logs.

Future Roadmap:

Phase	Planned Feature / Enhancement	Target Timeline	Expected Impact
Phase 2	Automated data refresh from live data sources	1-2 months	Always up-to-date insights
Phase 3	Sales and battery-adoption forecasting; charging infrastructure data	3-4 months	Forward-looking strategy and investment planning
Phase 4	Mobile-friendly views, alerts and cloud deployment with user roles	5-6 months	Wider access for executives, consultants and policymakers
